Presentation

Whatever the environment, the Timing Bullet GPS antenna will perform, year after year. The Timing antenna provides a perfect solution for fixed-site, rooftop, ZTI GPS Timing systems. This antenna is also a high-quality solution for adding GPS RF signals for ZTI GPS navigation systems.

Put it anywhere.

The antenna is housed in weatherproof packaging designed to withstand exposure to shock, excessive vibration, extreme temperatures, rain, snow and sunlight.

The dome is all plastic, and the threaded socket in the base of the antenna is corrosion resistant. The threaded socket accepts either a 1"-14" straight thread (typical marine antenna mount) or a 3/4" pipe thread.

The F-type or TNC antenna connector is located inside the threaded socket, which allows the antenna cable to be routed inside a mounting pole and protects the cable connection for added reliability.

The Bullet antenna is an active GPS antenna with 35 dB preamp (5 V DC), 30 dB preamp (3.3 V DC). The high-gain preamp allows the Bullet antenna to be used with up to 75 feet of RG-59 cable. The Bullet filtering improves immunity to other RF signals for reliable performance in hostile RF jamming environments.
